

LIVE CAMERAS: Storm damage in the aftermath of Hurricane Michael

Hurricane Michael was the most powerful hurricane on record to menace the Florida Panhandle.

By TEGNA Staff • October 11, 2018

Hurricane Michael made landfall near Mexico Beach, Florida, as a catastrophic Category 4 storm on Wednesday, the National Hurricane Center said. It pushed a deadly storm surge and whipped the coast with 155 mph winds.

It was one of the most intense hurricanes ever to hit the U.S. mainland and the most powerful one on record to menace the Panhandle, a roughly 200-mile stretch of fishing towns, military bases and spring-break beaches.

Several live cameras are capturing the storm's impact. Watch them here:

Note: Given the large number of people watching and strong winds in Florida, some live cameras may not be available for streaming.
