EarthCam, which provides construction projects with high-megapixel web cams to help them document their progress, has had an eye on the site since ground was broken on the 1 World Trade Center in 2004.

This two-minute video shows nine years of work on what could become the tallest building in North America when it reopens, from initial foundation work to the addition of the spire earlier this year.

Learn more about EarthCam and see [time-lapse videos](#) of other construction projects, including the recently reopened Bay Bridge in San Francisco, post-earthquake repairs on the Washington Monument and the reconstruction of a Sandy-demolished section of New Jersey boardwalk.
