

## Time-lapse video shows nine years of construction work on new World Trade Center

Posted on Friday, September 13, 2013 at 06:08 AM

To commemorate the 12th anniversary of the 9/11 attacks this video, showing the nine-year construction of the 1,776-foot One World Trade Center from the ruins of Ground Zero, was released.

The video was produced by [EarthCam](#) using hundreds of thousands of hi-def cameras positioned overlooking the construction site in Lower Manhattan.

Now almost complete, the video tracks the construction of the 104-storey, 1,776 feet high, is the tallest building in the western hemisphere.

The [time-lapse](#) shows the cleared area of Ground Zero and follows the construction until it culminates in the installation of the huge 408-foot, 758-ton silver spire that now tops out the skyscraper.

Here's the stunning time-lapse video:
