

Watch 11 Years of Construction on One World Trade Center in Less Than 2 Minutes

By Drew Mackie 06/03/2015 AT 07:20 AM EDT

New York City's One World Observatory is celebrating its grand opening with this amazing [time-lapse video](#), which shows the construction of One World Trade Center from October 2004 to May 2015. It's inspiring to see how much work went into these nearly 11 years, and this video allows you to see all that, bit by bit.

The video was made from hundreds of thousands of high-definition images documenting the construction of One World Trade Center, and then hand-edited together, according to the video's official YouTube description.
