

Video: New LAX terminal built in 4-minute timelapse

Monica Luhar | June 21st, 2013, 5:25pm

EarthCam, a company that provides live webcam streams and tech services, has a [time-lapse video](#) that compresses recent renovation of the Los Angeles International Airport's new Bradley terminal from three years into just shy of four minutes.

The renovation was part of a larger multi-billion dollar development program for the airport, which includes sustainable designs and the addition of dozens of retail stores and restaurants.

The project is said to be the largest public works project in the history of Los Angeles. During the five-year renovation phase, it is expected to launch and create 4,000 jobs.

EarthCam is best known for live streaming videos from popular destinations like New York's Times Square and the Eiffel Tower in Paris, France.

Watch and share this time-lapse documenting construction for the Los Angeles World Airports Capital Improvements Program. Our construction cameras captured more than 3 years of progress for the Bradley International Terminal renovations.
