For lovers of all things construction, [EarthCam](#) has just premiered its new [ConstructionCamTV](#) - a 24-hour "TV channel" devoted to a global network of live construction cameras and educational time-lapse movies. Live streaming and time-lapse video will showcase how star architects Frank Gehry, Jean Nouvel, Zaha Hadid and Norman Foster combine design and technology to create monumental works of art. Viewers will be transported to projects including leading medical centers, major league stadiums, sophisticated skyscrapers and complex bridges. Some of the most notable projects come to life with impressive hand-edited time-lapse photography. While watching a decade of work at the World Trade Center compressed into three minutes, it's plain to see how leading edge technology has transformed the construction industry. Visit construction jobsites and watch professional time-lapse movies on ConstructionCamTV at www.constructioncamtv.com and www.enr.construction.com. Interested in having your project featured on ConstructionCamTV? Go to www.earthcam.net.
