

## Shiny Fireball Over Arizona Captured By A number of Cameras | Video

03.06.2016

A NASA meteor digicam stationed at Mount Hopkins, Arizona and the [Sedona Pink Rock Cam/EarthCam](#) captured the intense flash of a meteor burning up in Earth's environment. The house company's Meteoroid Atmosphere Workplace estimated it to be 10 ft in diameter and touring at ~forty two,000 mph (sixty four,seven-hundred kph).
