EarthCam, a leading network of live cameras broadcasting scenes from around the world, has just released a [time lapse video](#) of the entire construction of One World Trade Center, which took place from October 2004 to Memorial Day 2015. The video, which captures the construction from a number of different angles, condenses the eleven-year project into a paltry two minutes.

1 WTC has had its fair share of controversy and news, from its “vanity height” being named structural to give it the title of Tallest Building in the United States, its new Sky Pod elevators that tell the history of New York City, the political and architectural battle for its design, and the real question: “Does 1 WTC suck?”
