

Mobile app EarthCam Control Center 8 allows monitoring projects from afar

August 22, 2016 Paul Dvorak

From EarthCam.net, the new Control Center 8 app is available along with features found few other places. Created for EarthCam managed service customers, the user-friendly app makes viewing, controlling, and marketing EarthCam camera images easier than previously possible. The app is available for Apple and Android devices.

Control Center 8 provides easy access to live streaming video that can be remotely controlled. Users can quickly access project archives to discuss and analyze project progress. With one touch generates time-lapse movies of progress-to-date. Users can share important updates and jobsite photos with a team or publicly by social media.
