

WOLF CONSERVATION CENTER MAKES "TOP 25 WEBCAMS" OF 2018 LIST!

By Wolf Conservation Center • December 20, 2018

Webcam lovers' favorite tradition returns with the 2018 edition of EarthCam's 25 Most Interesting Webcams. EarthCam's 2018 list of winning webcams includes everything from breathtaking scenery to scientific experiments and even wolves at the Wolf Conservation Center (WCC)!

The 20th annual list spans 8 countries and features engaging live webcams that entertained millions of people around the world in 2018.

Year-round, visitors to the WCC enjoy meeting Ambassador wolves Alawa, Zephyr, and Nikai, but the WCC is actually home to 48 wolves! Most of the WCC's "other" 45 wolves, both Mexican gray wolves and red wolves, reside off-exhibit, but not necessarily out of view! Unbeknownst to the wolves, live webcams invite an unlimited number of viewers to enter their private lives.

In the spirit of George Orwell's "1984," the WCC uses webcams to observe food and water intake and monitor the physical well-being of each wolf without the animals' knowledge. The cameras also allow staff to study family dynamics and thus make the best recommendations with respect to which wolves are most suitable for release.

The cameras also give a global audience an opportunity to learn about these critically endangered species and our efforts to recover them. Thanks to the webcams, the Center's educational reach far exceeds the boundary of its gates in South Salem, NY! The webcams have been wildly popular all around the world!

Tune in to our webcams here!
