

5 years of construction Panama Canal in 3 minutes Print E-mail

Monday, 12 December 2016 12:18

In June 2016, it completed construction of a new series of locks of the Panama canal that allows passage between the Atlantic and Pacific Oceans even the largest ship of the world. Construction began in March 2011 and was completed in June of this year, when through a new series of locks first ship set sail.

EarthCam's construction made from 142 different angles and with multiple cameras. The result is 150 seconds long recording time of five years of continuous construction.
