

## Time-lapse video of One World Trade Center being built – US marks 9/11 anniversary

12/09 17:33 CET

A [time-lapse video](#) charting the construction of the building that replaced the World Trade Center towers has been released – as the US marks 12 years since the 9/11 attacks.

It shows the construction of the tower, called One World Trade Center, from 2004 to 2013.

The video was produced by webcam operator [EarthCam](#).

In May the skyscraper's spire was added, making it, at 541-metres, the tallest building in the Western hemisphere.

It comes as thousands gathered this week at Ground Zero in New York to mark the anniversary.

A new documentary has also been released.
