

Two polar bears after one click

Wednesday, April 13, 2016

The Habitat of the Cochrane Polar Bear joined [EarthCam](#) network, which broadcasts live images of his two residents on the site [EarthCam.com](#), as well as on the website of the habitat. Among the places where we find these cameras, there's Time Square, New York, Sydney, Australia and San Francisco, California. The site supervisor to Habitat Polar Bear Cochrane, Paul Latendresse, talks about this initiative.
